

## **Cleaning Recommendation**

The surface should not be cleaned earlier than 4 weeks after its manufacture! Then, warm water and a soft cloth can be used. The use of special car cleaning cloths soaked in a cleaning solution has also proven effective (e.g. Sonax Clean and Drive).

**Warning:** *Whichever cleaning product you use, always make sure that it does not contain aromatic hydrocarbons, esters, ketones, halogenated hydrocarbons, or alcohols in a concentration exceeding 25%. We also advise against the use of vinegar-based detergents. The products should not be abrasive (rough, grating, coarse) and should always be mixed with warm water.*
