

Material, Design

T.board is a composite sandwich board provided with the T.Overface print cured by UV radiation on its face. The composite consists of two 0.21-mm thick aluminium layers joined by a polyethylene core made of recycled PE granulate. The material thickness is 3 mm, specific weight 3,250 g/m², fire resistance B-S1, d0.

Application

T.board is a multifunctional medium especially suitable for kitchen tiles, advertising and information signs, exhibition stands, wall panels and various types of art or decorative print.

Print motifs

The use of T.board print motifs from thematic galleries on the website www.overface.cz is free of charge. However, any other theme can be used, including your own photos, as long as it meets the required printing specifications. The use should be consulted with our study in advance.

Limit Dimensions

- Minimum size: 100 × 100 mm
- Maximum size: 3,050 mm × 1,500 mm

Note: *If you need to print a larger area, the print can be divided into several consecutive boards, so-called panelling.*
