FENIX NTM<sup>®</sup>

GLAKS

To prevent damage caused by excessive heat (peeling of the foil/front material), we recommend installing a heat shield inside the cabinet.

- „Z“ profiles are installed inside, on the right and left sides of the stove cabinet, using screws precisely at its bottom edge.
- „L“ profiles are placed on the sides behind the built-in oven and secured with screws.
- Installation of the appliance follows the installation of the shield.
- If the holes in the shield do not match the oven holes, new holes can be drilled.
- It is essential to follow the installation instructions of the electrical appliance manufacturer.

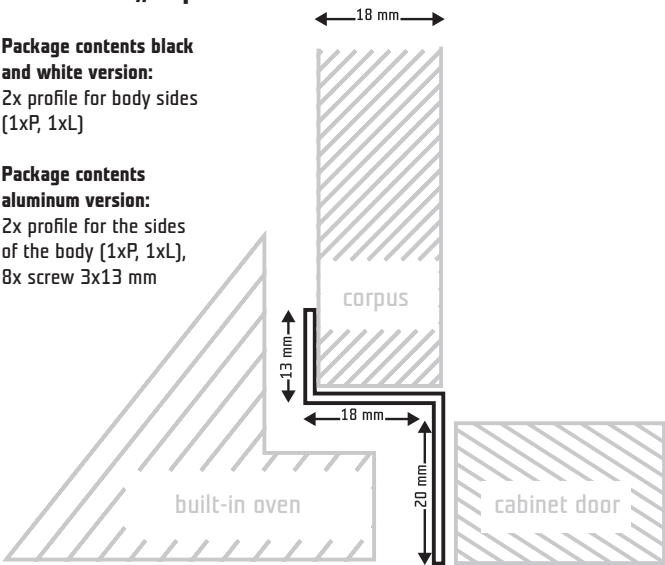

**Recommended Maintenance Instructions:**

Use only mild cleaning agents and a soft cloth or sponge to clean the surfaces.

**Heat shield „Z“ profiles**

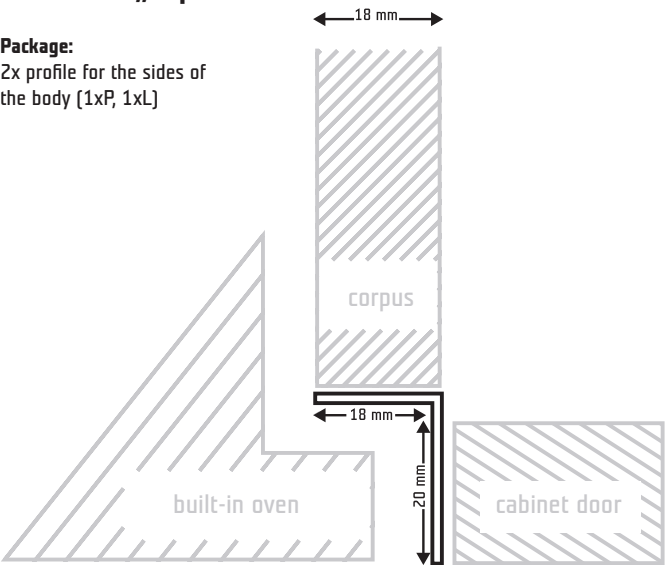

**Package contents black and white version:**  
2x profile for body sides (1xP, 1xL)

**Package contents aluminum version:**  
2x profile for the sides of the body (1xP, 1xL),  
8x screw 3x13 mm

**Heat shield „L“ profiles**

**Package:**  
2x profile for the sides of the body (1xP, 1xL)

Marking	Implementation
Protective heat shield – 2x „Z“ profile	aluminium
Protective heat shield – 2x „Z“ profile	white (RAL 9003 – matt)
Protective heat shield – 2x „Z“ profile	black (RAL 9005 – matt)
Protective heat shield – 2x „L“ profile	stainless steel
